## KNOW YOUR RX

It's important to understand a few key prescription drug terms.

### Generic Medication:

FDA-approved copies of brand name medication in dosage, strength, route of administration, quality and performance.

### Formulary Medication:

A list of brand name medications that are preferred over others because they provide the same clinical outcomes at a lower cost.

### Non-Formulary Medication:

Brand name medications that are still covered by the plan, but at a higher cost to you because they are not considered preferred.

**★ Important Reminder:** The \$1,850 Plan has a true family deductible and out-of-pocket limit. This means that if you cover a dependent (e.g., spouse, child, or multiple children), your family will need to meet the full family deductible of \$3,700 before co-insurance applies. It can be met by one family member or a combination of family members.
