TECHNICAL CAPABILITIES AT LILLY

Business & Technology Integration
A capability that ensures that IDS is anticipating business needs and leading the identification of the right technical solution that generates expected business outcomes.

Customer Experience Design
IDS delivers integrated experiences for all our consumers; comprised of information, technical capabilities, and services that work seamlessly together and in the context of the person using them.

Modern Architecture
Modern Architecture defines a network of interconnected components covering applications, services, data and infrastructure.

Cyber Security
People-centric, secure, vigilant and resilient, capabilities that protect information, products, and systems enabling Lilly to deliver on it's mission.

Data Science & Machine Learning
Lilly IDS plays a lead role in developing, deploying, and using advanced data/algorithm capabilities that empower decision making across all functions.

Development Operations (DevOps)
DevOps is a culture, which includes a set of processes, methods and tools for communication, collaboration and integration between development, operations and quality assurance.

Digital Product Operations
Lilly products in the future will consist of molecules, devices, apps, algorithms, and data. This capability ensures that the deployment and support of the digital elements of products and services are robust.

Business Process Automation (BPA)
Business process automation (BPA) is the application of technology that allows employees in a company to configure computer software or a "robot" to capture and interpret existing applications.
