TRACKING TAGS

What is a Tracking Tag?

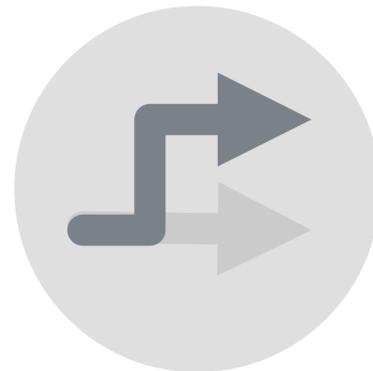

Codes that are applied to marketing that define information about the source of the visitor

Three Main Types:

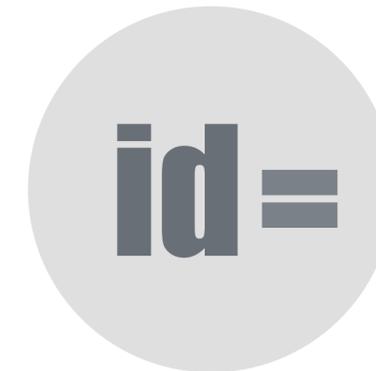

Pixel Tracking

Click Redirect

URL Parameter

Pixel Tracking

EXAMPLE:

```
<IMG SRC="http://  
ad.tracking.com;sz=1x1;or  
d=1445449228165?"  
BORDER=0 WIDTH=1  
HEIGHT=1  
ALT="Advertisement">
```

What It Is:

Invisible 1x1 pixel image that is embedded in the HTML code of a page, ad, or email

What It Does:

Counts every time the page or document loads (is viewed) and may store a cookie on user's machine

What It Tells Us:

Ad impressions, posting views, email opens
Does not count clicks

Pixel Tracking

Common Uses for Pixel Tracking in Recruitment:

- Email marketing
- Online newsletters
- Display advertising
- Job postings & templates (e.g. Monster & CareerBuilder)
- Company profiles pages (e.g. Glassdoor & LinkedIn)

Click Redirect

What It Is:

Clickable URL that redirects through an ad server or tracking platform

What It Does:

Counts every time the link is clicked and may drop a cookie on the user's machine

What It Tells Us:

Ad clicks, social post clicks, email link clicks
Does not count impressions or views

EXAMPLE:

<https://ad.tracking.com/clk/299984779;129917458;d?http://www.tmp.com>

DID YOU KNOW...

There are several free online tools to test click links to see if there is a tracking redirect happening. Wheregoes.com is an easy-to-use option.

WHEREGOES?

A tool for tracking the redirection path of URLs

enter http://....

Trace URL

WhereGoes does 1 thing: it takes a URL and shows you the entire path of redirects and meta-refreshes that leads to the final destination.

It's a unique utility that lets you troubleshoot links and perform competitive intelligence in a way that wasn't possible before.

Now you can diagnose complex link problems, find the source of online ads and see which third parties are tracking a given URL. Go ahead and enter your URL into the text box at the top of the page - you won't be disappointed.

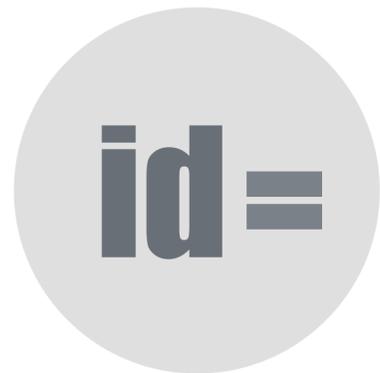

Click Redirect

Common Uses for Click Redirects in Recruitment:

- Search Engine Marketing (e.g. paid ads on Google)
- Job aggregators (e.g. sponsored jobs on Indeed)
- Display advertising
- Social posts
- Emails

URL Parameter

What It Is:

Code that is added to the end of the destination URL

What It Does:

It's read by the site or platform that the user lands on and tells the site information about the referring source of the visit

Does not drop a cookie

What It Tells Us:

Source of visit, ad unit, campaign

Does not count impressions, views, or clicks

EXAMPLE:

[http://www.tmp.com?
src=glassdoor](http://www.tmp.com?src=glassdoor)

or

[http://www.tmp.com?
utm_campaign=metrics&
utm_source=glassdoor&
utm_medium=posting](http://www.tmp.com?utm_campaign=metrics&utm_source=glassdoor&utm_medium=posting)

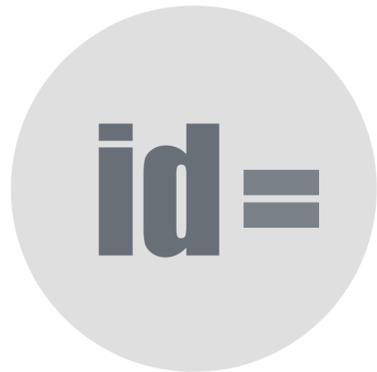

DID YOU KNOW...

URL parameters are easy to spot. They are visible in the address bar of your browser when you land on the site.

URL Parameter

Common Uses for URL Parameters in Recruitment:

- Source codes for your ATS
- Source codes for your career or job search site

WEB ANALYTICS

What are Web Analytics?

Script that is added to every page of a website to record visitor information, the source of traffic, and user behavior on the site

Common Providers:

webtrends®

What Web Analytics Tell Us:

Who Your Visitors Are

- New vs. returning
- Mobile vs. desktop
- Location
- Demographics
- Interests

Where They Came From

- Source & medium
- Organic vs referral
- Campaigns
- Paid Media
- Keyword searches

What They Did on the Site

- Pages viewed
- Time spent on site
- Search terms used
- Actions taken (purchases, signups, downloads, etc.)

What Web Analytics **Does Not** Tell Us:

- How many people viewed your ad, posting, email, etc.
- How many jobs you posted
- Applications started in ATS *
- Applications completed in ATS *
- Applicant drop off *
- Interviews
- Hires

DID YOU KNOW...

It is possible to use web analytics to measure application starts, completed applications, drop-off, and other behaviors throughout the apply process. The problem is that it is typically difficult to get your ATS to implement web analytics code.

INTERNAL SYSTEMS

What is System Data?

The data in your ATS or HRIS system(s). Information about jobs, candidates, and hires.

Common Providers:

What ATS Data Tell Us:

JOB DATA

ID
Category
Location
Title
Description
Recruiter

CANDIDATE DATA

Name
Email
Status
Job Applies
Assessments
Hire Date
Source

TRUE

The candidate journey crosses multiple separate environments before conversion

Each environment has its own method of tracking and data

Environments do not “talk” to each other

FALSE

Tracking tags are universal

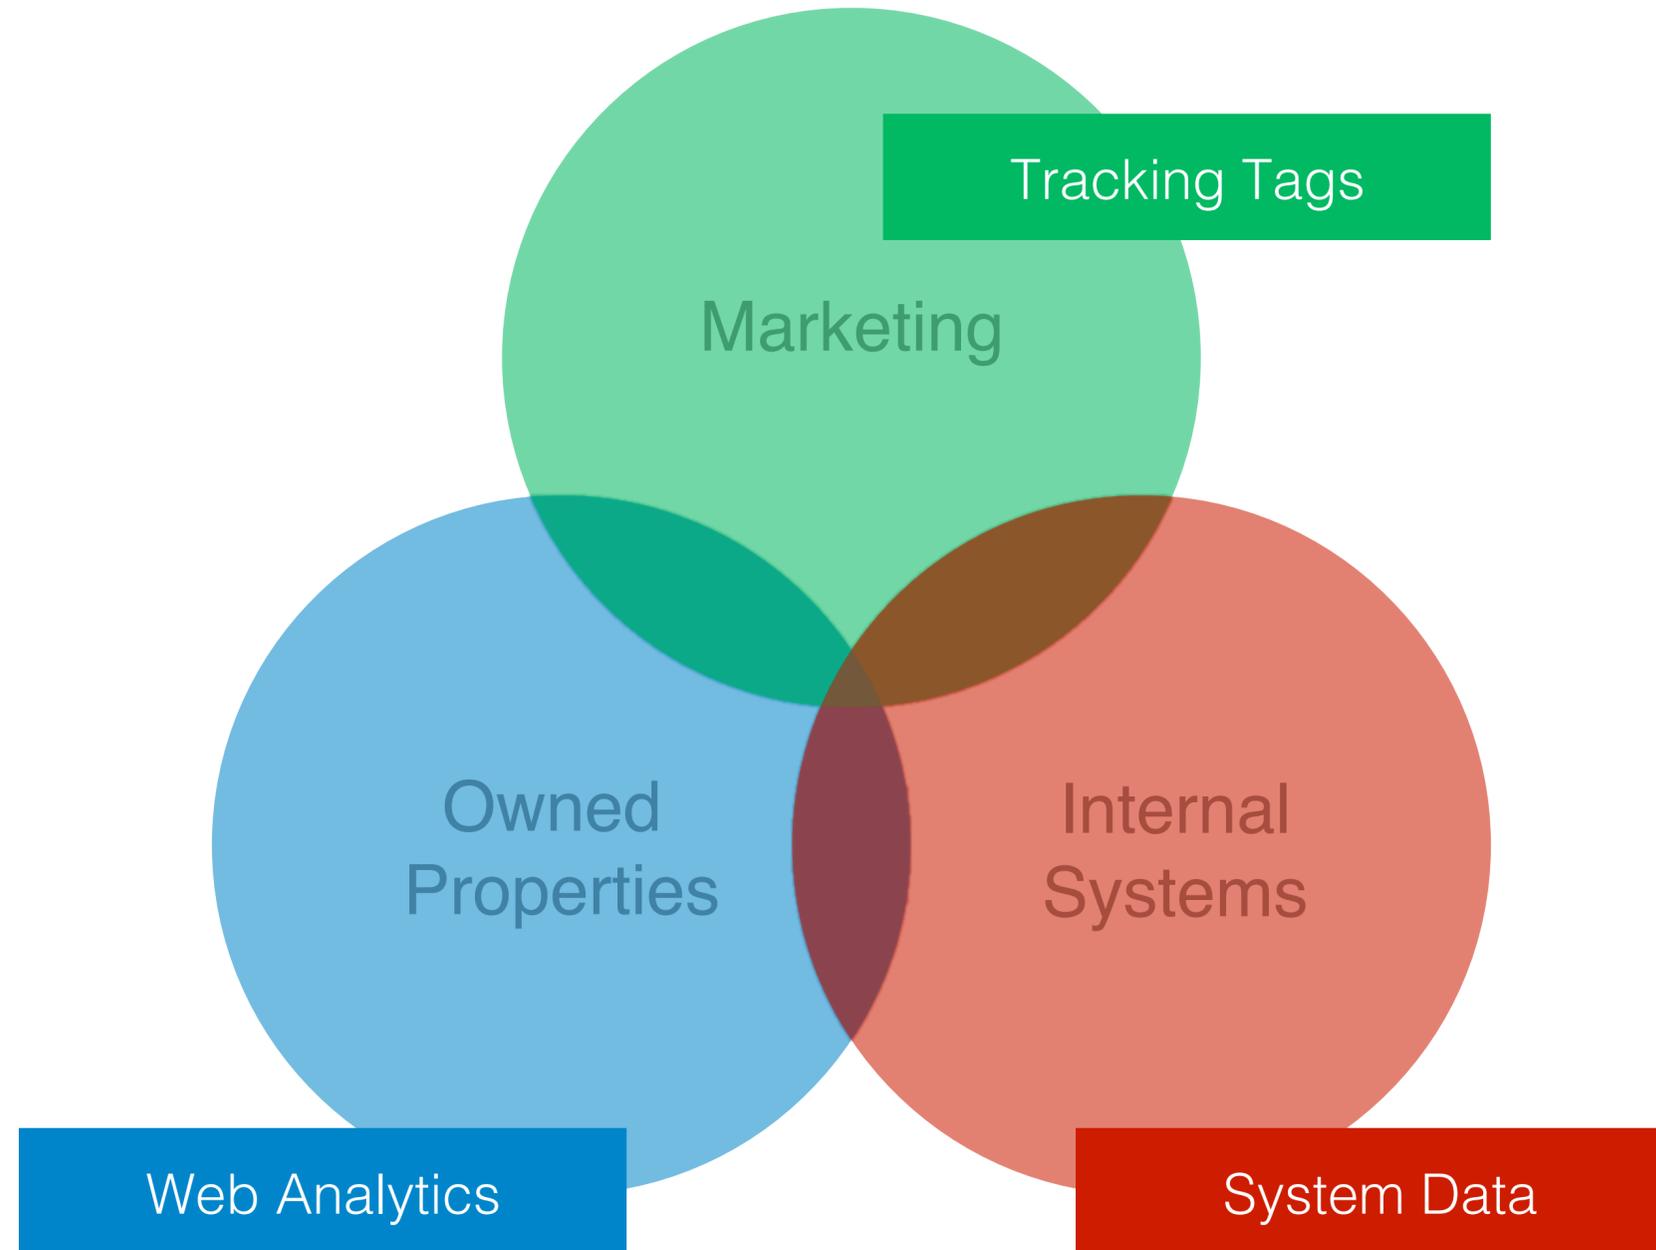

I should drive all my marketing directly into my ATS site

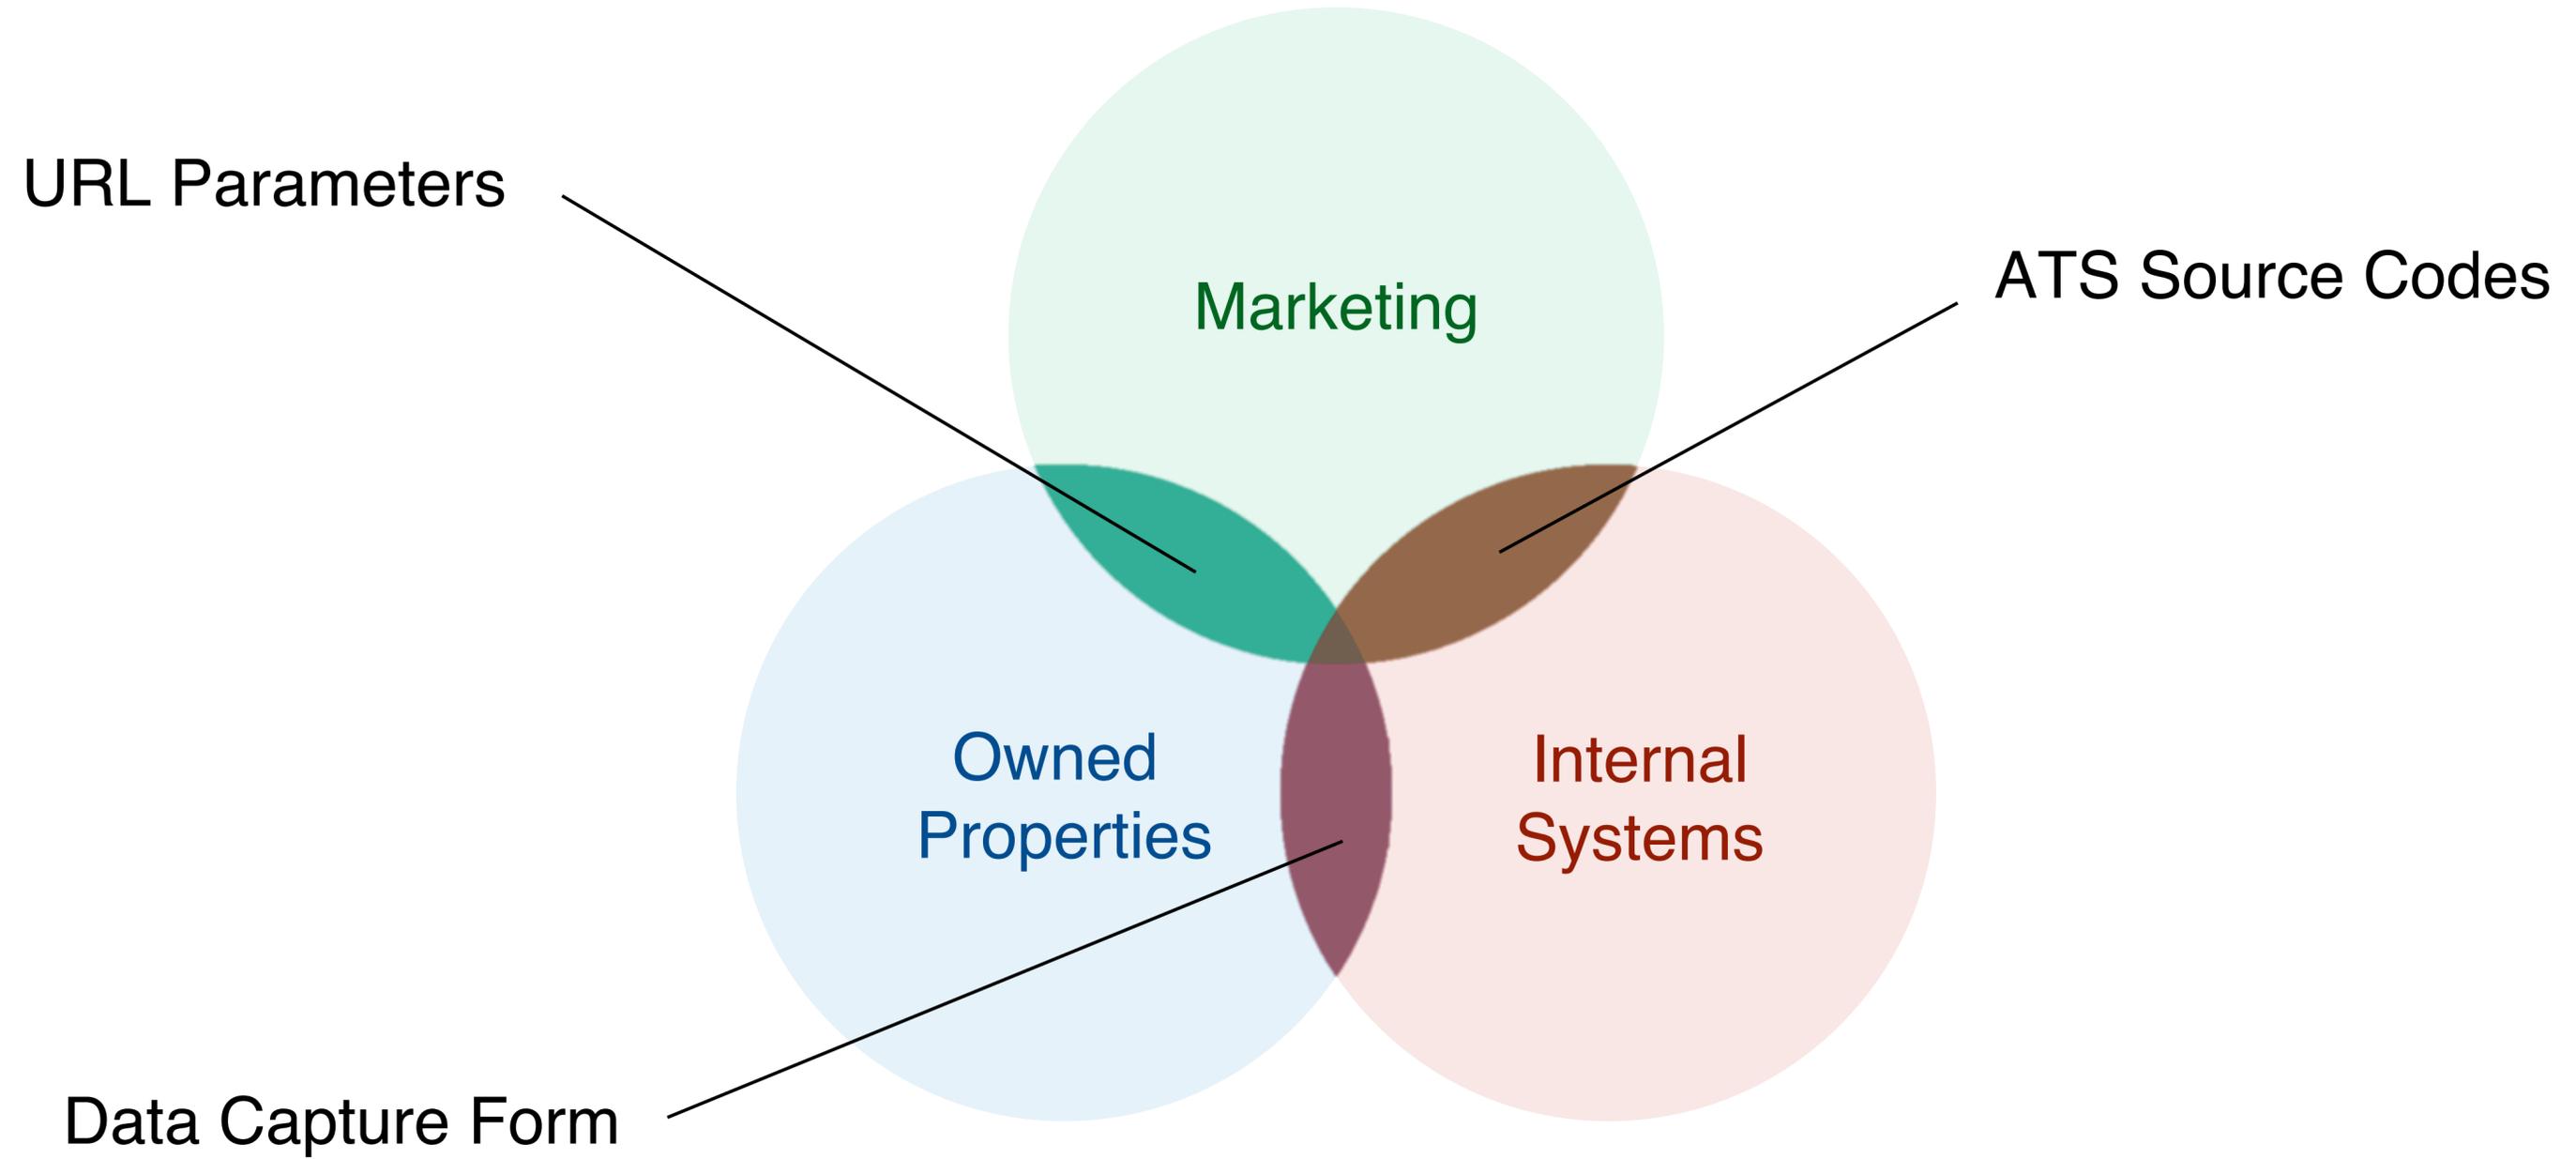

Tracking tags can be used to determine applicant drop off and applicant flow

TRACKING ACROSS ENVIRONMENTS

 TRACKING ACROSS ENVIRONMENTS

TRACKING ACROSS ENVIRONMENTS

URL Parameters

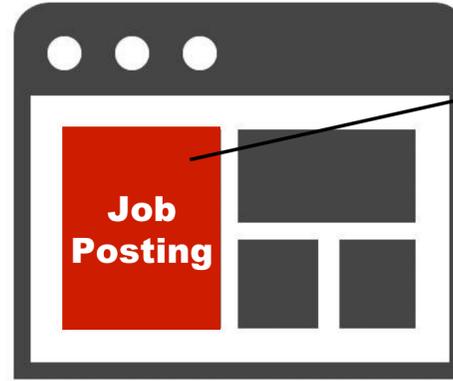

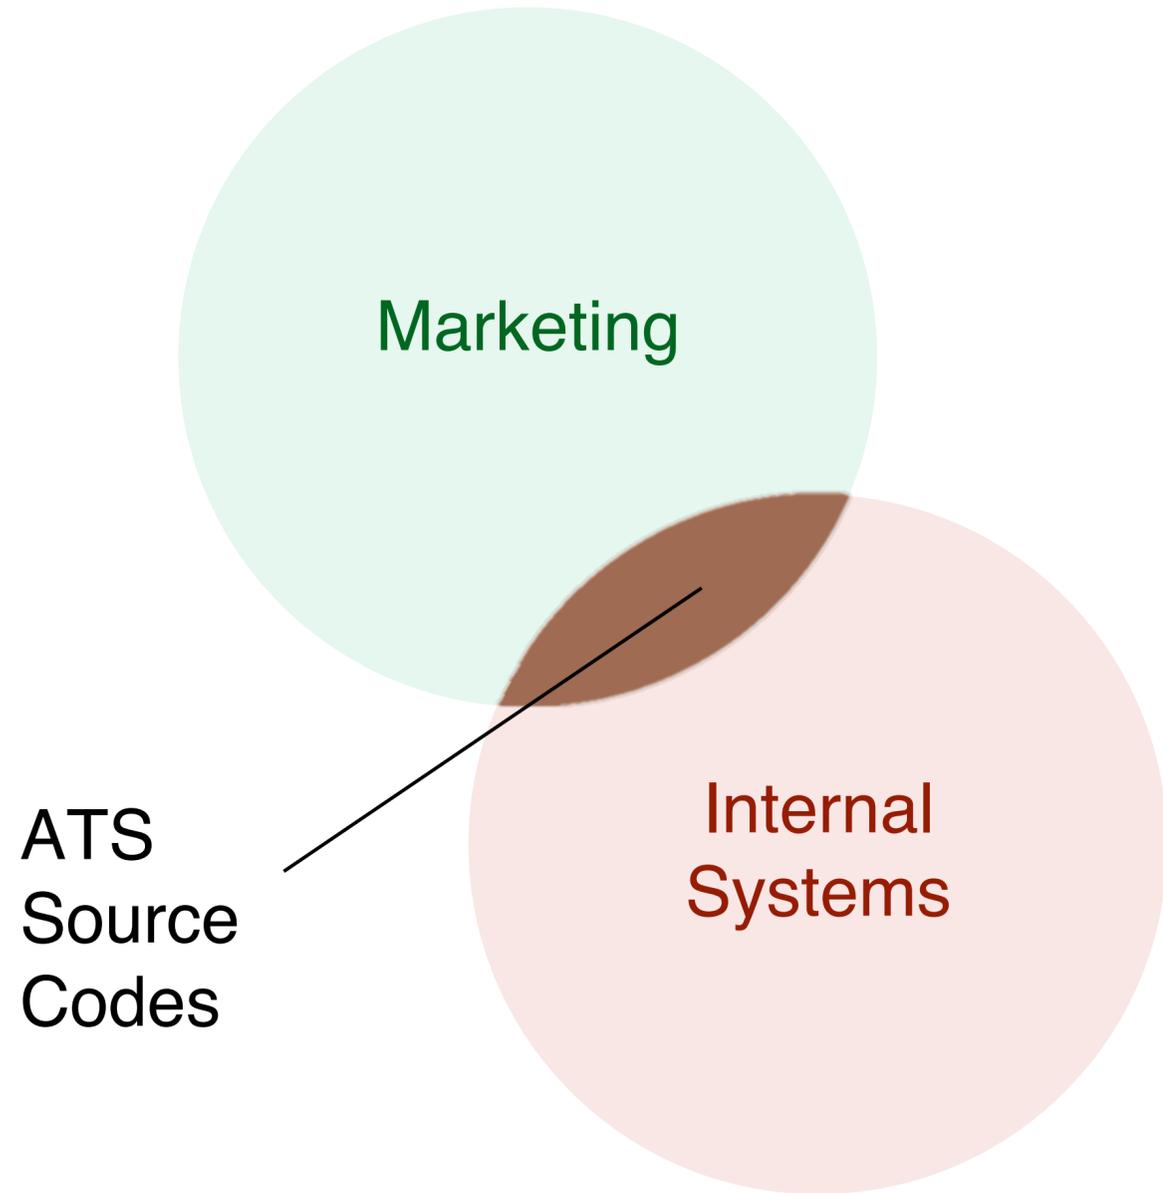

Links To:

www.tmp.com?utm_campaign=Metrics
[&utm_source=Glassdoor](http://www.tmp.com?utm_source=Glassdoor)
[&utm_medium=300x250Banner](http://www.tmp.com?utm_medium=300x250Banner)

Campaign	Site	Ad	Visits	Page Views	Time on Site	Email Signups
Metrics	Glassdoor	300x250 Banner	2,500	3,000	5:30	500
-	Glassdoor	-	10,000	5,000	2:30	200
Metrics	Indeed	Sponsored Ad	50,000	2,000	1:00	100

TRACKING ACROSS ENVIRONMENTS

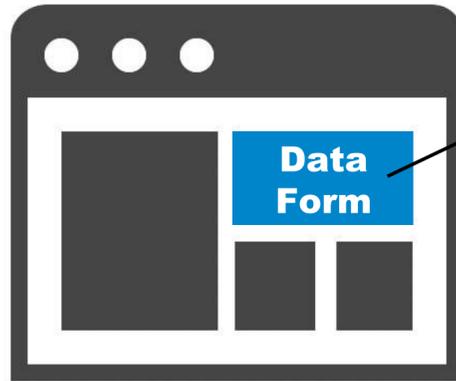

Links To:
www.tmp.taleo.com/job556677?src=glassdoor

Name	Job ID	Job Title	Apply Date	Status	Source
Smith	556677	Analyst	5/1/2015	New	Glassdoor

TRACKING ACROSS ENVIRONMENTS

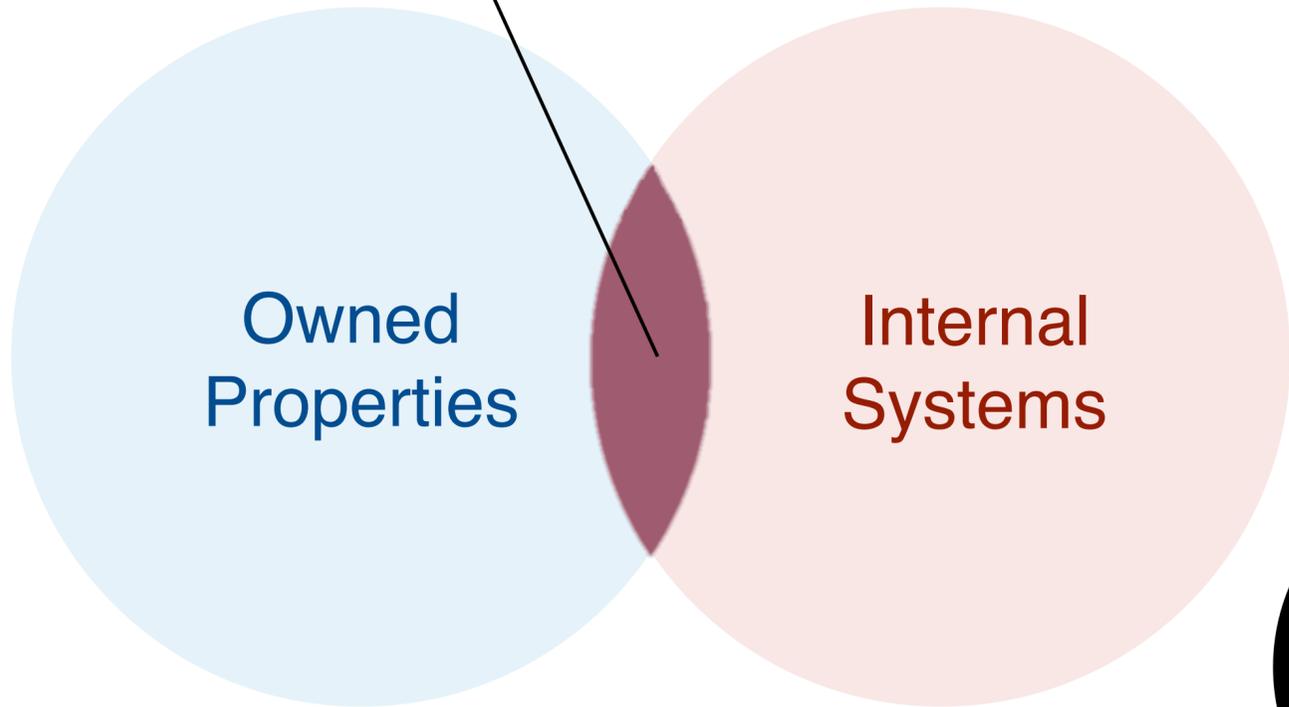

Data Capture Form

First Name:

Last Name:

Email:

Name	Email	Job Viewed	Source
Smith	jsmith@gmail	Analyst	Glassdoor

Name	Email	Job Title	Apply Date	Status
Smith	jsmith@gmail	Analyst	5/1/2015	New

TRUE

It is possible to track across environments

URL parameters should be used for all of your outbound marketing messaging

ATS source codes can be used for marketing that drives directly to the ATS

There is value in tracking user interaction on your owned properties

FALSE

One tracking method can be used to track across all three environments

ATS source codes measure all sources to the ATS

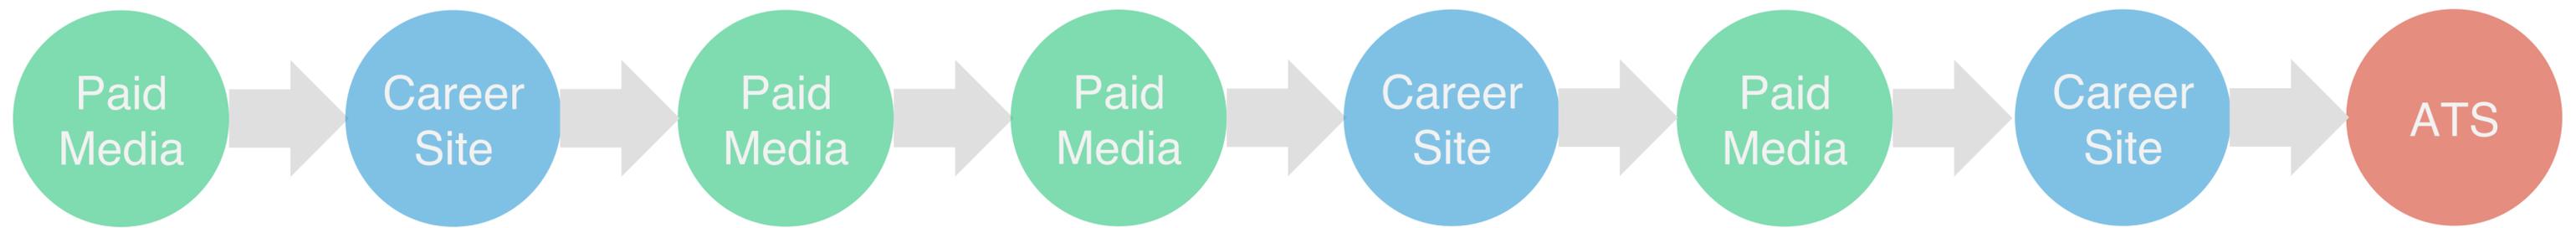

Sources measured by web analytics are automatically stored in the ATS

BEST PRACTICES

KNOW YOUR PLATFORMS

- Know what tools are available to you
- Use click tags and URL parameters whenever possible
- Measure apples to apples with a third party platform
- Push for web analytics on the ATS

Organize

Outline and categorize marketing efforts
Think about intended behavior and the best user experience
Think about what you want to learn from the results

Define Success

Have a clear definition of intended results
Set goals and milestones
Share these with all team members

Tag & QA

Test tags before sending out to media
Develop SOPs for internal use of tags

DURING CAMPAIGN

Define Reporting

Determine frequency of data & reporting
Use the right data for the right reason
Share results with team members

Set Automation

Have reports sent to you automatically
Set alerts in web analytics reporting

Adjust Strategy

Learn from the data
Don't be afraid to adjust expectations

Refine Reporting

Work with providers to determine what data was most useful
Do away with unnecessary information
Adjust frequency if needed

Re-Organize

Was the tagging strategy sound
Did it provide the proper level of information
What would make the process easier for team members

THANK YOU
